PROVINCE OF BRITISH COLUMBIA

DIVISION OF VITAL STATISTICS

ANNUAL REPORT

1987

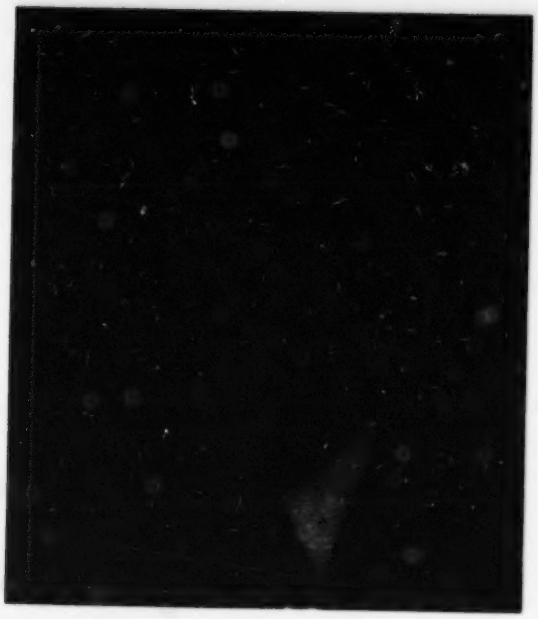
VICTORIA, B.C. JULY, 1988

To Robert G. Rogers,
Lieutenant Governor of the Province of British Columbia

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Province of British Columbia, Division of Vital Statistics, Annual Report for 1987.

Peter A. Dueck
Minister of Health



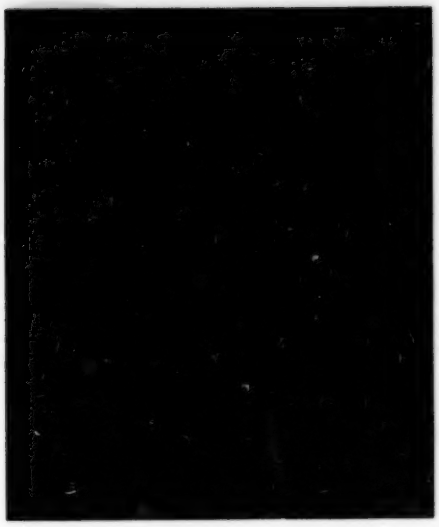
MINISTRY OF HEALTH
VICTORIA, B.C., JULY, 1988

The Honourable Peter A. Dueck
Minister of Health
Victoria, B.C.

SIR: I have the honour to submit the Province of British Columbia, Division of Vital Statistics, Annual Report for 1987.

I have the honour to be,
Sir,
Your obedient servant,

S. P. Dubas
Deputy Minister of Health



DIVISION OF VITAL STATISTICS
VICTORIA, B.C., JULY, 1988

S. P. Dubas
Deputy Minister of Health, Victoria, B.C.

SIR: I have the honour to submit the Province of British Columbia, Division of Vital Statistics, Annual Report for 1987.

I have the honour to be,
Sir,
Your obedient servant,

R. J. Danderfer
Director of Vital Statistics

INTRODUCTION

This publication is a summary of Vital Statistics information in British Columbia for the calendar year of 1987.

The Division of Vital Statistics is responsible for the ascertainment, registration and certification of vital events through the administration of the Vital Statistics Act, Marriage Act, Name Act and Part II of Wills Act. Information compiled from these registry databases provide statistics for research and general interests.

In addition, the Division maintains an ongoing provincial registry of cases with congenital anomalies and physical handicaps. Selected statistics on these are included in this report.

Birth, death and marriage statistics in this report do not include events for B.C. residents which occurred outside of the province. These adjustments are made by Statistics Canada and are reflected in their publications.

OVERALL SUMMARY

POPULATION

The estimated B.C. population as of June 1, 1987 was 2,925,700. From Statistics Canada census of 1986, the population of June 1, 1986 was determined to be 2,889,207.

BIRTHS

The number of live births in B.C. for 1987 was 41,595, resulting in a birth rate of 14.2 per 1,000 population. For 1986, the number of births was 41,812, corresponding to a rate of 14.5 per 1,000.

42% of total B.C. births were primiparas (1st delivery for mothers). Out-of-wedlock births account for 21% of the total. The average age for mothers giving birth in B.C. was 27.

Almost all live births (98%) were single live births. Women under 20 years old account for roughly 5% of total births, while women 35 and over account for 9%. The greatest percentage of live births (approximately 38%) were born to women in the age group 25 - 29.

The majority (83%) of all live births were delivered at term, between 38 and 41 weeks gestational age. Average weight at birth for all infants (regardless of gestational period) weighing between 500 and 4,500 grams was 3,392 grams. The number of infants considered premature (less than or equal to 37 weeks gestational age) was 4,223, accounting for 10% of all live births.

MARRIAGES

The number of marriages in B.C. for 1987 was 23,377, compared with 21,819 for 1986. This represents an increase of 7%.

In 58% of the marriages, both the bride and groom had not previously been married. Marriages where both parties were divorced account for 15%. Marriages where the bride is single and the groom is widowed or vice versa represent the smallest proportion (each at less than 1% of total marriages). Average ages for brides and grooms are 29 and 32 respectively. Age groups with the highest number of persons marrying are: 25 - 29 for males and 20 - 24 for females.

DEATHS

The number of B.C. residents who died in B.C. in 1987 and 1986 were 21,571 and 20,985 respectively. Death rates were similar for the 2 years; 7.4 and 7.3 per 1,000 population for 1987 and 1986.

Ranking pattern for the leading causes of death has remained the same over the past 3 years, with heart disease as the number one cause of death, followed immediately by cancer. The third and fourth leading causes of death were cerebrovascular disease and accidents. Among deaths due to accidents and violence, the three leading causes were motor vehicles, suicides and accidental falls. Deaths due to motor vehicle accidents have decreased from 22.3 per 100,000 in 1983 to 15.8 in 1985. Since then, it has increased slightly to 18.6 in 1987. Suicide rate has been declining for the past 3 years and is the lowest for the 5 year period 83 - 87.

The stillbirth rate in 1987 was 7.0 per 1,000 total births, comparable to that for 1986 (7.4 per 1,000). Over the past 20 years however, it decreased from 12.8 to 7.0 per 1,000 total births.

Perinatal death rate (stillbirths plus early neonatal deaths) in 1987 was slightly lower than that of 1986 (10.7 versus 11.2 per 1,000 total births), and much lower than that 20 years ago (25.7 per 1,000). Stillbirths account for two-thirds of the perinatal deaths in both 1987 and 1986.

Infant death rates (death of infants under 1 year old) for 1987 and 1986 were 8.3 and 8.1 per 1,000 live births respectively. Almost half of these infants died within 7 days after birth. Similarly, these rates are lower than those 10 and 20 years ago.

Neonatal death rates (death of infants under 28 days old) were the same for 1987 and 1986 (4.6 per 1,000 live births). Early neonatal death rates (death of infants under 7 days old) remained stable at 3.8 and 3.9 per 1,000 live births for 1987 and 1986 respectively.

HEALTH SURVEILLANCE REGISTRY

In 1986, 41 babies were born with Down's Syndrome. There were also 39 infants born with neural tube defects, representing an incidence rate of 9.3 per 10,000 live births. This is higher than the previous four years where incidence rates for neural tube defects were less than 7 per 10,000. The number of cases where babies were born with cleft palate and cleft lip was 82.

At year end 1987, the number of people registered with adult and unspecified diabetes was 9,132 and the corresponding figure for juvenile onset diabetes was 2,290. The analogous 1986 statistics were 7,586 and 2,193 respectively. The 1987 figures reflect a 20% increase in the number of adult and unspecified diabetes known to the registry.

Cases of mental retardation recorded in B.C. at year end 1987 were 13,110, with a male to female ratio of 1.3. For 1986 there were 12,991 recorded cases, also with a male to female ratio of 1.3.

Multiple Sclerosis accounted for 2,409 cases at year end 1987, but with a male to female ratio of .45. The number of MS cases recorded in 1986 was 2,128.

TABLE 1

SUMMARY OF BIRTHS, DEATHS, MARRIAGES, AND INFANT MORTALITY
British Columbia, 1967, 1977, 1986 & 1987

	1967		1977		1986		1987	
	Number	Rate	Number	Rate	Number	Rate	Number	Rate
LIVE BIRTHS (rate per 1,000 population)*	32,899	16.9	36,691	14.7	41,812	14.5	41,595	14.2
DEATHS (rate per 1,000 population)*	16,170	8.3	18,596	7.5	20,985	7.3	21,571	7.4
MARRIAGES (rate per 1,000 population)*	16,026	8.2	21,156	8.5	21,820	7.6	23,377	8.0
STILLBIRTHS (rate per 1,000 total births)	422	12.8	327	8.9	309	7.4	292	7.0
PERINATAL DEATHS (rate per 1,000 total births)	856	25.7	586	15.8	473	11.2	449	10.7
INFANT DEATHS (rate per 1,000 live births)	703	21.4	495	13.5	340	8.1	347	8.3
NEONATAL DEATHS (rate per 1,000 live births)	475	13.2	288	7.8	194	4.6	192	4.6
EARLY NEONATAL DEATHS (rate per 1,000 live births)	434	13.2	259	7.1	164	3.9	157	3.8

* Rates for 1987 use the Statistics Canada estimate of the B.C. population on June 1, 1987; rates for 1986 use census information for June 1, 1986.
